High School Mental Math Contest

Follow along as your proctor reads these instructions to you. Your Mental Math score sheet is on the back.

GENERAL INSTRUCTIONS applying to all tests:

- Good sportsmanship is expected throughout the competition by <u>all</u> involved, both competitors and observers. Display of poor sportsmanship may result in disqualification.
- Calculators or any other aids may not be used on any portion of this contest.
- Unless stated otherwise, all rational, non-integer answers need to be expressed as reduced common fractions except in case of problems dealing with money. In the case of problems requiring dollar answers, answer as a decimal rounded to the nearest hundredth (ie, to the nearest cent).
- All radicals must be simplified and all denominators must be rationalized.
- Units are not necessary as part of your answer unless it is a problem that deals with time and in that case, a.m. or p.m. is required. However, if you choose to use units, they must be correct.
- Leave all answers in terms of π where applicable.
- Do not round any answers unless stated otherwise.
- Record all answers on the colored cover sheets in the answer column only.
- Make sure all answer sheets have all the information (name, team number, etc.) at the top of the sheet filled out.
- Tests will be scored as a 0 if answers are not recorded on the answer sheets.
- Blank answer sheets and answer sheets with no name will be scored as a 0.

Mental Math - 30 sec per question

8 problems read orally to everyone - Approximately 8% of Individual Score - 25% of team score

When it is time to begin, the proctor will read the first question twice. You may not do any writing or talking while arriving at a solution. Once you have a solution, record it on the sheet in front of you. You may not change or cross out answers once you have written an answer down. If there are eraser marks, write-overs, or crossed-out answers, they will be marked wrong. Once all students have laid their pencils on the desk, another question will be asked. If a student doesn't lay his/her pencil down, the maximum wait time is 30 seconds after completion of the second reading of the question before another question is asked. You may continue to work on a problem while the next question is being read. The value of each question is a one or zero. Each student will be asked the same eight questions. Individual scores used to determine individual placing will be determined by the sum of the Mental Math score and the Individual Test score for each individual. In addition, the top three Mental Math scores from one team will be totaled and doubled and will contribute to 25% of the team score.

#	Problem
1	Evaluate: 6!
2	How many positive integral factors does 5,000 have?
3	All of a triangle's sides are integers when measured in meters. If two of the sides measure 18 meters and 34 meters, what is the longest the third side can be, in meters?
4	What value(s) of z satisfy $5z - 13 - 82$?
5	How many of the numbers 1, 2, 3, 4, 5, and 10 are greater than the average of the set?
6	What is the average of all of the integer multiples of 7 between 1 and 100 inclusive?
7	Suppose that one painter can paint the entire house in twelve hours, and a second painter could do it in eight hours. How many hours would it take the two painters to paint the house together?
8	What is the surface area, in square meters, of a right circular cylinder with a height of 8 m and a base diameter of 8 m?

PRE-CALCULUS - Individual Contest

Tear this cover sheet and scratch paper off and fill out the top of the colored answer sheet prior to the start of the test. The graph below is for your use, if needed.

INDIVIDUAL TEST - PRE-CALCULUS - 35 minutes

You may NOT be seated next to anyone from your school. If you are MOVE NOW to avoid being disqualified! When you are prompted to begin, tear off the colored sheet and begin testing. Make sure your name and school are recorded on the answer sheet. The raw score will be 2 points for correct answers to problems 1-30 and 3 points for 31-40. Record your answers on the score sheet. No talking during the test. You will be given a 5 minute time warning.

Sponsored by: EKA Chemicals December 7, 2013 PRE-CALCULUS - Individual Contest

	Questions 1-30: 2 points each
1	What value(s) of m satisfy $7m - 11 = 5m + 43$?
2	What is the length, in meters, of the other leg of a right triangle with a hypotenuse measuring 8 m and a leg measuring 6 m?
3	Evaluate 12 factorial times 2 factorial divided by 10 factorial.
4	Evaluate $\begin{vmatrix} 2 & 5 & -7 \\ -4 & 4 & 1 \\ 0 & 5 & -1 \end{vmatrix}$
5	What is the length, in meters, of the long leg of a 30-60-90 triangle with a hypotenuse measuring $4\sqrt{6}$ meters?
6	Evaluate: $\sqrt{42 + \sqrt{42 + \sqrt{42 + \dots}}}$
7	Simplify by rationalizing the denominator: $\frac{144}{7-\sqrt{13}}$
8	What are the coordinates, in the form (x, y) , of the vertex of the parabola with equation $y = x^2 - 6x + 7$?
9	What is the name of the point at which a triangle's three angle bisectors meet?
10	Evaluate: $\frac{\binom{6}{2} + \binom{50\cos(4\pi)}{3\sin(\frac{\pi}{2})}}{\binom{3}{-1} + \binom{3}{4} + \binom{2}{-1} + \binom{2}{-1}}.$
11	What value(s) of <i>j</i> satisfy $2j^2 + 3j - 9 = 0$?
12	If $h(j) = 2j - j^3 $ and $k(m) = m + m^2$, evaluate $h\left(k\left(k(h(1))\right)\right)$.
13	Suppose that a circle with a radius of 2 is inscribed in an equilateral triangle. What is the area of the triangle?
14	If 3 farmers can plow 12 acres of their farm in 6 hours, how many acres would 5 farmers plow in 3 hours?
15	In a two-player game, a coin is repeatedly flipped. If a total of four Heads are flipped before a total of four Tails, Player One wins. Otherwise, Player Two wins. If the first flip is Heads, what is the probability that Player Two wins on the sixth flip?
16	If $a_n = 1 + 2 + \dots + (n-1) + n + (n-1) + \dots + 2 + 1$, evaluate a_{70} .
17	Find the equation, in the form $y = a(x - h)^2 + k$ of the parabola passing through the points (1,2) and (-1,14) if (1,2) lies on the parabola's axis of symmetry.
18	Calculate the value of $(a + b)^2 - (a - b)^2$ when $a = 31$ and $b = 25$.

19	On a hot day, a five foot tall girl walks until her head is just barely in the shadow of a twenty
	foot tall building. If she is 32 feet from the building at that moment, how many feet long is the
	building's shadow?
20	What are the coordinates, in the form (x, y) , at which the graphs of $y = x^2 + 7x + 5$ and
	y = -5x + 50 intersect?
21	Ginger has a trashcan full of lemons. Smiley eats 1/3 of the lemons. Dougy steals 14 of the
	remaining lemons. Laundres takes 35% of the remainder and Gloosky takes three. CeeCee
	steals 40% of what's left and then Bagel takes half after that. After Momo takes two lemons,
	there is one lonely lemon left in the can. How many lemons did Ginger originally have?
22	How many positive integers less than 100 are not multiples of 2, 3, or 5?
23	Two circles have radii of 9 m and 8 m, and their centers are 25 m apart. What is the length of
	one of their common external tangents?
24	In the following cryptarithm, where each letter represents a unique digit from 0-9 inclusive,
	what is the value of A?
	COCA
	+COLA
	OASIS
25	At Fair & Heights High School, students reported the daily temperature on each of the five
23	weekdays. If the standard deviation of the temperature was 2 degrees and the mean
	temperature was 60 degrees, what is the maximum temperature they could have seen during
	the week?
26	Evaluate in base ten: $11_2 + 22_3 + 33_4 + \dots + 99_{10}$.
27	If $x + y + z = 2$, $xy + yz + xz = -11$, and $xyz = -12$, what is the largest possible difference
/	between two of these variables?
28	In a certain event at the Olympics, there are three Americans, two Russians, one Brazilian, and
20	one Canadian. For medal counting purposes, the order of countries in the top 3 matters, but it
	does not matter which individual finishes where. Additionally, the order outside the top 3 does
	not matter. How many distinct medal results involve at least one American winning a medal?
29	What is the greatest prime factor of 13! 12! + 12! 11! ?
30	What is the solution, in the form (d, f, g) , of the system of equations $d + f + g = 10$,
	2d - f = 20, and $3d + 5f + g = 40$?

	Challenge Questions: 3 pts each
31	Evaluate: $1 + \frac{2}{3 + \frac{4}{1 + \frac{2}{3} + \frac{4}{1 + \frac{2}{3}}}$
32	What is the next term in the following sequence: 1, 2, 4, 8, 16, 22, 26, 38, 62, 74?
33	Two thru-hikers heading opposite directions agree to meet atop Marmot Pass and exchange car keys at noon on December 7th. However, it's hard to know exactly how fast you'll hike, and it's hard to sit around when you could be making miles. So in the end, one of the hikers decides he'll be sure to arrive sometime between 9AM and 2 PM and wait up to two hours, while the other decides she'll be sure to arrive between 10 AM and 1 PM and wait up to an hour. What is the probability that they actually meet one another?
34	Define set A to be the set of all positive even integers, set B to be the set of positive odd integers, set C to be the set of positive prime numbers, set D to be the set of all positive multiples of three, and set E to be the set of all positive factors of 10!. If three of the five sets are chosen at random, what is the probability that there will be a minimum of two elements in the intersection of the three chosen sets? Express your answer as a reduced fraction.
35	Simplify in terms of $i = \sqrt{-1}$: $\sum_{n=1}^{8} \left(\frac{1}{n}i^n\right)$
36	The leadership of the Math Club is a President, a Vice-President, and Vice-Squared-President, and there must be at least one person of each gender among them. If the Math Club nine boys and eleven girls, how many different ways could the leadership be chosen?
37	Find the smallest positive value of x , in degrees, where $\frac{\sin^{10}x + 5\sin^8x\cos^2x + 10\sin^6x\cos^4x + 10\sin^4x\cos^6x + 5\sin^2x\cos^8x + \cos^{10}x}{\cos^2x - \sin^2x} = 1.$
38	Find the area, in square units, of the region inside $4x^2 + 9y^2 + 36y = 108$ and outside $4x^2 + y^2 = 4$.
39	A spherical ball with a radius of 6 cm is rolled into a corner of a room and held in place, and then a ball with radius 2 cm is placed on top of this ball, so that each ball is touching both walls and the other ball. How many centimeters is the top of the smaller ball above the floor?
40	Suppose $f_1 = f_2 = 1$ and $f_{k+2} = f_k + f_{k+1}, k \ge 1$. If $S_n = \sum_{k=1}^n f_k, \text{ what is } \sum_{n=1}^{10} S_n?$

	Challenge Questions: 3 pts each
31	Evaluate: $1 + \frac{2}{3 + \frac{4}{1 + \frac{2}{3 + \frac{4}{3 + \frac{4}{3 + \frac{4}{3 + \frac{2}{3 + \frac{4}{3 + \frac{4}{3 + \frac{2}{3 + \frac{4}{3 + \frac{4}{3 + \frac{2}{3 + \frac{4}{3 + \frac{4}{$
32	In triangle ABC, AB = 4, AC = 6, and BC = 8.5. If $ \cos(\angle ACB) = m/n$, where m and n are positive integers with greatest common divisor 1, find $m + n$.
33	Two thru-hikers heading opposite directions agree to meet atop Marmot Pass and exchange car keys at noon on December 7th. However, it's hard to know exactly how fast you'll hike, and it's hard to sit around when you could be making miles. So in the end, one of the hikers decides he'll be sure to arrive sometime between 9AM and 2 PM and wait up to two hours, while the other decides she'll be sure to arrive between 10 AM and 1 PM and wait up to an hour. What is the probability that they actually meet one another?
34	Define set A to be the set of all positive even integers, set B to be the set of positive odd integers, set C to be the set of positive prime numbers, set D to be the set of all positive multiples of three, and set E to be the set of all positive factors of 10!. If three of the five sets are chosen at random, what is the probability that there will be a minimum of two elements in the intersection of the three chosen sets? Express your answer as a reduced fraction.
35	Simplify in terms of $i=\sqrt{-1}$: $\sum_{n=1}^{8}\left(\frac{1}{n}i^n\right)$
36	The leadership of the Math Club is a President, a Vice-President, and Vice-Squared-President, and there must be at least one person of each gender among them. If the Math Club nine boys and eleven girls, how many different ways could the leadership be chosen?
37	Find the smallest positive value of x , in degrees, where $\frac{\sin^{10}x + 5\sin^8x\cos^2x + 10\sin^6x\cos^4x + 10\sin^4x\cos^6x + 5\sin^2x\cos^8x + \cos^{10}x}{\cos^2x - \sin^2x} = 1.$
38	Find the area, in square units, of the region inside $4x^2 + 9y^2 + 36y = 108$ and outside $4x^2 + y^2 = 4$.
39	A spherical ball with a radius of 6 cm is rolled into a corner of a room and held in place, and then a ball with radius 2 cm is placed on top of this ball, so that each ball is touching both walls and the other ball. How many centimeters is the top of the smaller ball above the floor?
40	Suppose $f_1 = f_2 = 1$ and $f_{k+2} = f_k + f_{k+1}$, $k \ge 1$. If $S_n = \sum_{k=1}^n f_k$, what is $\sum_{n=1}^{10} S_n$?

1	Evaluate as a Roman numeral: CCCLIV + DCCLXV
1	
7	Find the area of a 75° sector of a largest possible cross-section of a sphere with surface area 56π .
2	
2	How many unique pairs of integers (x, y) , such that $-50 \le x \le 50$ and $-50 \le y \le 50$, satisfy
3	the equation below? $2x - 4y = 0$
	2x + y = 0
Λ	If, at the end of the year, it takes Jill 5 hours to clean the classroom by herself and it takes Jack
4	3 hours to clean the classroom by himself, how many minutes would it take for them to do the
	task together? In triangle ABC, AC = $\sqrt{2}/2$, BC = 1, and $m \angle A$ CB = 105° . The length of segment AB is equal to
5	$\cos \theta + \sin \theta$, where θ is an angle in degrees and $0 < \theta < 90^\circ$. Find the largest possible value of θ .
	Find the area of the quadrilateral with vertices at the points $(-1, -3)$, $(2,3)$, $(4, -1)$, and
6	(-2,3).
7	Team A won sixteen of their sixty games last season. If Team B wants to have a twenty-five
7	percent better winning percentage in their ninety-game season, how many games must they
	win? Note: if Team A's percentage were 4%, Team B would want their percentage to be 5%, not 29%.
	Given the infinite geometric sequence starting with 1 and having common ratio 1/3, a second sequence
8	is constructed by the following rule: each term of the original sequence is used as the radius of a sector, the area of which is the corresponding term in the second sequence. The first term uses a full circle, and
	each consecutive sector has a central angle half that of the previous one. What is the sum of the terms
	of the second sequence?
Q	In the game of poker, a full house is a set of five cards that contains a three of a kind and a pair. For example, this forms a full house: $5\mathbb{Z}$, $5\clubsuit$, $3\spadesuit$, $5\spadesuit$, $3\heartsuit$. Let p and q be relative prime integers
)	such that p/q is the probability of getting a full house when dealt a random 5-card hand. Find
	the value of $p+q$.
40	Function f has the property that if a real number x is in the domain of f , $1/x$ is also in the domain.
110	Furthermore, $f(x) + f\left(\frac{1}{x}\right) = x$. Assuming the domain of f is non-empty, find the arithmetic mean of
	all the elements in the domain of f .

$\underline{\text{COLLEGE KNOWLEDGE BOWL ROUND \#1-SET 1}}$

#	Problem	Answer
1	What word best describes a polynomial of degree two?	Quadratic (NOT Parabola)
2	What is the product of the coordinates of the intersection closest to the origin of the curves Y-EQUALS-ONE-THIRD-OF-THE-SQUARE-ROOT-OF-THREE $\left(y=\frac{\sqrt{3}}{3}\right)$ and Y-EQUALS-THE-TANGENT-OF-X $(y=\tan x)$, where X is measured in radians?	$\frac{\pi\sqrt{3}}{18}$
3	What is the product of 317 and 11?	3487
4	The cat shelter has human employees and feline occupants. If there are a total of 59 heads and 130 feet, how many cats are currently in the shelter?	6
5	A circle with radius 1 is inscribed in a square. Another smaller square is placed in the corner of the square so that one vertex just touches the circle. What is the side length of the smaller square?	$1 - \frac{\sqrt{2}}{2} \text{ or }$ $\frac{2 - \sqrt{2}}{2}$
6	In a survey of 144 people, 56 like candy canes and 36 like advertisements. If these preferences are independent of one another, how many people like neither?	66
7	If the first and second terms of an arithmetic series are six and seventeen respectively, what is the sum of the ninth and tenth terms?	199
8	What are the coordinates, in the form (x, y) , of the point that is two-thirds of the way from the point $(1,8)$ to the point $(-5,17)$?	(-3,14)
9	If the half-life of a radioactive substance Mathium is 4 hours and we start with a 400 mg sample, how many milligrams of the substance will remain after one day? Give your answer as a decimal.	6.25mg
10	What is the probability of randomly choosing an integer between 30 and its additive inverse (inclusive) such that the integer divided by five produces a positive integer?	6/61

$\underline{\text{college knowledge bowl round #2-}SET~2}$

#	Problem	Answer
1	Q are integers. What word can be used to describe all such numbers?	tional
2	The angle FOUR-THOUSAND-NINE-HUNDRED-TWENTY-FIVE-PI-OVER-TWELVE $\left(\frac{4925\pi}{12}\right)$ radians is coterminal to x degrees, where $0 < x < 360$. Find the value of x .	75
3	Suppose Andy has a standard 52-card deck. Andy pulls a card at random. If it is an ace, Andy will do 11 push-ups; if it is a face card, Andy will do 10 push-ups; otherwise, Andy will do the number of push-ups of the card's value. If Andy goes through the entire deck in this manner, how many push-ups will he do?	380 [push ups]
4	Excluding 0 and 1, what is the first perfect square in the Fibonacci Sequence?	144
5	What is the distance between the x-intercepts of the parabola with equation Y-EQUALS-THREE-X-SQUARED-MINUS-FOUR-X-MINUS-FIVE $(y=3x^2-4x-5)$?	$\frac{2\sqrt{19}}{3}$
6	How many prime numbers are there less than 50?	15
7	I have three different horror books, four <i>identical</i> fantasy books, and five different science fiction books. In how many distinguishable ways can I arrange these books next to one another on a shelf if I wish to keep books in the same genre together?	4320
8	You have thirteen coins worth a total of thirty-seven cents. If each coin is either a penny, nickel, or dime, what coins do you have?	Six nickels and seven pennies
9	The logarithm in base B of C is A $(\log_b c = a)$ and the logarithm in base C of B is A-MINUS-ONE $(\log_c b = a - 1)$. List all possible values of A.	$\frac{1\pm\sqrt{5}}{2}$ ONE-PLUS-OR-MINUS-ROOT-FIVE-OVER-TWO
10	A regular hexagon is circumscribed by a circle with a circumference of 12π (twelve "pie"). What is the area of the region inside the circle and outside the hexagon?	$36\pi-54\sqrt{3}$

High School Mental Math - 30 sec per question

8 problems read orally to everyone - Approximately 8% of Individual Score - 25% of team score

When it is time to begin, the proctor will read the first question twice. You may not do any writing or talking while arriving at a solution. Once you have a solution, record it on the sheet in front of you. You may not change or cross out answers once you have written an answer down. If there are eraser marks, write-overs, or crossed-out answers, they will be marked wrong. Once all students have laid their pencils on the desk, another question will be asked. If a student doesn't lay his/her pencil down, the maximum wait time is 30 seconds after completion of the second reading of the question before another question is asked. You may continue to work on a problem while the next question is being read. The value of each question is a one or zero. Each student will be asked the same eight questions. Individual scores used to determine individual placing will be determined by the sum of the Mental Math score and the Individual Test score for each individual. In addition, the top three Mental Math scores from one team will be totaled and doubled and will contribute to 25% of the team score.

INDIVIDUAL MULTIPLE CHOICE - 15 minutes - 10 problems - 20% of team score

This test is the only test where you will be penalized for incorrect responses. You will receive 2 points for a correct letter response, 0 points for leaving it blank and -1 point for an incorrect response. It is not necessary to write your personal name on the test, but you may put it at the bottom of the test so your coach will be able to give you back the correct test. This test is taken individually, but it is part of your team score, including zeros for missing team members. Your team score will be calculated by taking the mean of your four team members' scores. When you are prompted to begin, tear off the colored sheet and begin testing. Since this is a multiple choice test, ONLY a letter response should be indicated as an answer on the answer sheet. No talking during the test.

PRESSURE ROUND - 10 minutes - 5 problems - 5 rounds - 15% of team score

Proctor Name

When it is time to begin, you will be handed a packet of five problems. There is a copy of the problems for each team member. Two minutes after the start of the test you are expected to submit an answer for one of the problems (it can simply be a guess). The maximum value of this answer is 1 point. In another two minutes you are expected to submit another answer to one of the four remaining problems; its maximum value is two points. This process will continue until all the problems are answered and each consecutive problem's worth will go up by one point. You must submit your answers on the colored sheets given to you. If you do not have an answer at the end of a two minute period, you must still submit an answer sheet with an identified problem number on it. Failure to do so will result in loss of points. This event is timed, and you will be given a verbal 5 second warning and told to hold your answer sheet up in the air. You may keep working as the sheets are collected. If a team answers the same question more than once, only the first answer will be scored and the other attempts will be ignored.
